Transcript: -----

Recrapt's base was found by. Jungwell and. Pentar and then they attacked and defeated him when he logged on.

So since my base has also been found, me and. Rec have decided to build a new one together in a completely new location. I need to go and find. Recrapt because he's searching for a brand new place to build the base.

And what has to head over there. I want to let you guys know that. I have new merch. It's a golden-brided penguin available in three colours.

Fatih shirts, hoodies, joggers, I'm wearing, I'm not gonna stand up but. I'm wearing joggers. Plus, there's pencil case teams at notebooks and signed phone cases.

There's like, a hundred different phone models available on here. So if yours isn't on there, I don't know what else to do. But yeah, hand sign by me. Anyway, let's go and find.

Recrapt. Change a plan. Me and. Rec have decided on a spot.

But before. I go there, I want to grab a load of the items. I have stashed in the second base that. I built.

Because let's be honest, it's just a waste of time. There's absolutely no point me having it. It's already been found by. Pentar and.

Jungwell and. Prince. I'm never gonna go about there. So yeah, I'm gonna move out the stashed stuff at the very least.

And then. I feel like. I'll be able to start fresh, start a new and draw a line under this base.

I did like the fact of having an ocean monument base. The issue was, whilst. I was in it, there'd be squids getting murdered above me.

So there'd just be loads of ink sacs. So it was a bit of a dead giveaway. So yeah, that was a little bit of an oversight on my part.

But hey, we live in. Lerm. I don't even know what's down here. Has anybody set a trap.

Can you imagine. So yeah, people have been here. People have found this. They didn't know about the secret barrels though, ladies and gentlemen.

That one looks kind of rubbish. That one's not there. That's way better. That's definitely worth getting.

That one's pretty good as well. I was gonna say, thankfully. I have spare shalker boxes. Apparently.

I've managed to fill up every single one with gum found it. Oh, that wasn't great. Think it was it. All right, so we have a new plan.

Empty the shalker boxes in a stash at the new place. And then go back for that stuff. I also don't care about breaking stuff like that because.

I feel like. I'm never gonna use it again, am. I'm out as well. Leave a few extra signs of life.

All right, I'd expect to be. I'm officially dang goodbye. Oh wait, I should get the steep slate in real life. This is kind of cool.

This is exciting. Yeah. Goodbye. Goodbye, bass.

All right. Oh my gosh, I'm literally on the opposite side of the map. Oh my gosh. See, this is why.

I chose this position because. It's pretty near to both of my basses. So do you reckon we remove any portals in the area if we see one.

Honestly, that's not a bad idea. I'm like totally game. Yeah, I mean, my last portal was miles away from my bass.

Yeah, it was. But we didn't find it because of the portal, right. Well, I heard that it was because of the portal. Oh, yours was a deep slate, right.

I bet they just like started digging around. I think they just like have insane amounts of hours just digging around it. Yeah, that's true. Like everyone's just looking at deep slate, yeah.

Honestly, it might not be a bad idea to just like get a good villager trading hall set up, but just buy a double chest full of every single book. I mean, like some of you don't need to and then just kill them all. Yeah, well, my thinking is, especially while the one's in line, why don't we just, I don't know what your villager trading hall's like, well, I could go to mine and just do that.

Oh yeah, just get a whole bunch of books because. I have every single book. I can leave them there as well like that because nobody's touching them.

Oh my gosh, it's. S-B, it's. Down we go. So you want me to dig like a separate drop sheet, wasn't it.

Yeah, actually, let's do. So like if this is our drop down, then like maybe have this be like, oh wait, here's what. I did with the meeting room and the one before. I did, because you can kind of hear bubble columns like on subtitles if you're like within range.

I have a just a water elevator down like 20 blocks and then there's a little platform where it splits into like a bubble column and it drops you. I reckon that's not small. To be honest, I didn't even use a bubble column in the last one.

I need another water bucket to make an infinite source. Yeah. That's what we're placing in the same place. Okay, cool.

Yeah, there's no. And then. I'm thinking like literally just like one of these is down and one of these is up.

Down we go. You say when. I'll stop that. Okay, okay.

I think we should probably stop like, we have the hill around us, but we might as well just go. Oh, are we in a cage. No, we're in an answer. You get through play as well.

I think just like right around zero, just like a couple blocks above deep slate wherever that is. Okay, this is maybe where we need a different spot. Why is it gotta be a massive cage. You can't find a cave when you're looking for one, can you.

No, okay. I've got an angry endim an after me. Okay, I'm just kidding. Let's just pick a different spot, yes.

Just pretend that never happened. All right, I'm gonna do the same set up thingy. All right, take two. All right, let's try again.

I mean, what's the chance to dig a doubting for. Nova. Cave. I hear about right.

Exactly. Honestly, it might be worth it like one. What. This is kinda sus, right.

I mean, someone's being here, right. Yeah, yeah. Those are not natural cobblestone. Is it fine.

Is the question. Dude, look at this. See, this is what. I mean, people just dig around us, be.

So this is just, oh, I'm just gonna dig around. I guess. And like, hey, I might find a base. Should we try a different quadrant.

I mean, is there anywhere safe. I don't know. What are people doing. Okay, we're thinking this, okay.

I mean you're gonna build a base, we're like, okay, let's build it in a giant grove tiger because nobody will be able to tell there's a base there. So the base owners are like, let's search in the good places to do a base. So maybe we have to build a base in a bad biome but somehow make it undetectable.

If that makes sense. Yeah. I don't know how we do that, but. Like, just in a regular oak forest.

Maybe. I got suggested once a coral reef because there's just so many entities already there, like, loads of tropical fish. Wait, that's kind of a cool idea. Let's do it.

Let's get out of this biome. We got snowy to be subtle anymore. Oh, the creepers in the world come up. This is, we're not going back the same way, are we.

No, I'm not. I'm not an idiot. You can race me unless you get to their first. I just am lost.

Wait, SB, I had a thought what the coral reef. Is that a bottle. Anybody who's building like. TNT duper is gonna go to the coral reef.

It's also in the ocean, so the floors, like we'd have to go like into the deep slate to like actually make the base to stay hidden. Okay. Just think a coral reef is a bad idea then. I don't know.

I just want to like be able to make the base in the stone, I think. Well, I don't know. Is it like how bad is it to like build your whole base in deep slate.

It's like we'd have to go to like why like negative 30 to like be safe from name tags that people are swimming under the water. Is that how low down the coral reef goes. I call reefs to tell you on the map. Generally fairly shallow.

I mean, I'm just that now. I'll have a look. Okay, so it's like 50-ish, 40-ish. So we would have to go to like negative 20.

I guess we should probably just like dig on stuff before we like totally commit. Maybe just like dig like under the coral reef if that's what you really want to do. I'll check the first tiger that we were looking at. The old growth, the old tiger.

Oh, Zanzong. In reality, your base doesn't get found. It only gets found because you like build it below a pole, right.

And my tunnel was connected to under that portal. I mean, if you find a base, surely you don't look near that base for another base, right. Just build a new base under the ruins of the portal.

Yeah, I mean, come on. This is a pretty good hill too. Like for name tag distance, you could dig a lot. Yeah, like this, not a good place.

Over there, there's like more hills. All right, I'm just gonna dig down again, SB. I found a village in a portal up 2827. Oh, no, for the guy.

It's like a sheep's shearing station. Looks like we've got a honey farm. Looks like a slime farm. Yeah, what do you think of this spot for a dig down to a base.

Yeah, right here in this little look. All right, I honestly, I just need a spot to store my items. Is it now. This is it.

Unless there's just a massive cave or something, I'm down to send this. There's like a lot of space here too, honestly. Well, I need to go get a heart that's left in a barrel from a panga.

I can get three skulls in like literally a couple minutes too. Okay, well, I'm currently in a massive cave right here. We could just like fill it all in. And we could use it to bail this.

Yeah, I think. I'm fine with this cave. I think it'd be hard to find like a totally cave-less.

If this was like maybe like as big as cave is like that first one, maybe. I'd be like, I don't know. I think these cords where where we're gonna near, where we're gonna build our old bases.

Probably a good sign. I could, why do you need so many bookshelves. That was how. I decorated my old base.

Oh my gosh, I got the heart. I'm feeling pretty good about our base location though, I think. Yeah, I feel like we, you know, we've done something.

You know, we've made some progress. We picked a spot. What are you doing, SP. Oh my god.

I like, I got pretty close to dying. Oh my gosh, wait, why do you have so much gunpowder. I spent a little time. I'm gonna leave you to some work.

I'm gonna go and get my stuff. Gonna have to get you for this time. Oh my gosh. Did you spawn a wither.

That was a creeper. Yeah, okay, I was you. Okay, I was like, there's no way that bacon is above me.

Why have. I got the advancement. I had nothing to do with it. You're just like, close enough.

So after finally choosing a place to start a base, I'm taking extra shulkers to collect all the items from the one under the monument. At this time, we're actually gonna be able to get them. Successfully made it to the old base. Granted, it did take me two weeks to do this because.

I ended up getting really, really sick and couldn't record. So let's hope that nobody's been here, all right. I think we're okay. It's so nice to be able to record again, guys.

I've got all of these shulker boxes ready to fill up with all of my stuff. And then. I can grab a few extra humble belongings and get out of here.

I've got everything we need. Now, the wolf, yeah, you're gonna stay in there. Is there anything in this chest, bonjour. Does this bonjour even work.

I don't even think this is a great. Dark. Oak tree farm. Yeah, really.

All right, you are gonna stay here, okay, survivor. Because if we take it to the new base, you'll probably give it away somehow. Rick will not be happy if. I give away our new base.

So yeah, that's not gonna happen. Goodbye, old lotion monument. And because it's raining, oh, I can travel so, so quick, all right.

Let's get to the new base because it's been a couple of weeks. Rekka's has been busy. He's been working away at the base. I am very, very excited to see.

I've got to make sure my electric don't break, by the way, while. I'm flying over there. Basically when. I'm going at such high speeds with the electric and the ripped-eye trident.

All right, here we are. This is exciting. Look at that, straight into a chest. Very nice indeed.

I trust. Rekka. Implicitly with my life. Oh my goodness, he has been busy.

This is great teaming with him. He's just gone ahead and done all the work. Oh my goodness, look at this. He's got a beacon.

Oh, no way, that goes all the way to the top. Turtle farm, question mark. Is that like. SB, do you want to do some work.

Maybe maybe make a turtle farm. Escape tunnel. Great idea. But it doesn't actually get used anywhere.

All right, well that's really, really good, Rek, thank you. Honey farm, sugar cane farm. What is the point of a honey farm. I don't know, I mean, very little things are used for

honey farm.

Sugar cane farm, it wouldn't be the worst thing in the world. Okay, I'll just do a bit of sugar cane harvesting for him. Auto, brewer. I feel like he's left a few things for me to do.

You know, he's like. SB, do some work. What a cool brewing place. This is how he does his brewing, I see.

Okay, a lot of pots. The question is, when. I drop down, I put some barrels here with all my gunpowdering.

Where's he put them. Has he put them in here. Do you think he just used it all up. It was like, you know what, we need tea and tea, so we're gonna use all the best bees, come back.

Where is all my stuff. Rek, what have you done. Infested, okay, this is an. XP farm.

Oh brilliant, let's see if it works. Where. I'm gonna get silverfish everywhere or. I'm gonna be able to prepare my.

Elijah, hello guys. Oh, spare armadillos, I tell you what, Rek, make sure good base. I'm disappointed. I couldn't help, but.

I guess this is now my time to shine. I was. Rek, I would put gunpowder in the brewing place so maybe put it here.

I don't know, what's he done with it all. I'm here by making this, the sugar cane chest. Are these guys instanti crumming. Okay, well we should actually be wearing the.

Elijah. Oh, look at that, great little farm. I feel fully recovered now. I do have a little bit of gunpowder that was in my.

NHS, so. I guess that's what. I'm gonna have to use, because. I don't know where else.

To look, it's possible he's put some barrels hidden somewhere, maybe, I don't know. Have a that or a. Rekrup has literally robbed me. Yeah, I really don't know.

I've already been betrayed, it would seem. All right, let's see. I need to do some stuff to help here. I think realistically.

I can move a lot of these things into storage. Yeah, more bookcases, you never know when you need them, Rek. Guys, I found the gunpowder. I think at this point.

I'm ready for the next step, which is to go ahead and get back to my old base and get some better gear sets. At the moment, I've got what. I'm wearing and. I've got a spare one in a sugar box.

And from there, I haven't really got anything outside of that. I think it would be smart to have a couple more spare sets in case things should go wrong. I'm also gonna grab the materials for one of the auto brewers and bring it back to the new base.

What on earth. Why is there a random wither. Did somebody fight the wither over it. Oh, this is spawn.

I forgot about this. Who destroyed that. Oh wait, team of apocalypse did. Anyway, yeah, I feel like it was kind of a subtle hint from.

Rekrup that he'd had enough in building, so he wants me to do some work, which you know what is fair enough, all right. I've pretty much just been in bed for the last two weeks. Trying to recover and trying to get better, so yeah.

It's about time that. I now pull back. Who built this. Somebody really recreated a desert pyramid.

Just reckon it's a trap. You know what. These are the kind of things you just move on and leave, all right.

I ain't down to some random trap. Oh yeah, it's nice to be back. I think. Rekrup's been coming here.

I'll be honest, he's not done a very good job. I've covering this up. I hope there's nobody else here. Yeah, Rek said that he's been using this to make armor sets.

I mean, I doubt anyone else will be here. I hope not anyway. He's any cured all of these as well. I didn't cure these guys, but he's been doing something down here.

So, I'm just wondering around what's this all about. Not sure. I like somebody else living in my home. I've got a few spare armor pieces here and a load of books that need a plane.

I'm gonna get to work and make all of the armor sets that. I possibly can. And once. I make that, all the sets of armor are done.

I just need to make the tools. The tools come very easily, but. I don't know if. I really need to be getting multiple shovels, but you know what.

I've come this far, so. I might as well. And there we go. I've got all the stashes.

I need of fully maxed out stuff. I mean, yes, I could get soul speed and swift sneak on them, but. I'm not that bothered about that. I'll also use the spare em, I'm also gonna get plenty more bottles of.

XP and plenty more gold and carrots. I guess. I might as well max out these rip-tied tridants as well that.

I found. Just in case they ever need spare ones. I'll also top up my cobwebs supply at this farm. I've got more than enough cobwebs now.

As you can see, I've got loads in these shulker boxes, loads in my hand to chest, and. I've also got plenty of. XP bottles as well. I don't really have any spare space in any of my shulker boxes now, but.

I am gonna take advantage of what little inventory space. I do have. We'll also come back for these materials for the turtle farm because we need one of them in the new base, but that's something to worry about later because.

Operation. Builder. Brewer and actually contribute to the base is in full swing.

We've made it back. Well, if. Reck has been here or someone's been in the area because this sugar cane has been growing, that's interesting.

Who's been loading these chunks. I suppose even if someone had been here, they'd never know that hiding deep underground was a base, so yeah, I don't think we have to worry too much about that. I'm also gonna have to expand this room, hold on. Let's remove those.

We don't want random hoppers and items going, well, don't go into the hoppers and going down there, but yes, I am gonna have to expand this. You know what, I'm so glad that. I can finally say to. Reck, yeah, I did something.

I don't want to mess it up, but like, hey, Reck, wanna work on the base. I wanna be like, hey, Reck, I've built a brewer, I've built a turtle farm. Do you wanna work on the

base together. You know, some bring something to the table because at the moment, yeah, it's just done all the work.

I feel really bad. I was literally on my deathbed, you know, not feeling well all. I should, I mean, there's no one online to activate the beacon and then we can install mine.

As long as. I don't forget, I don't think there'll be an issue with that, will there. Like, the whole point of the beacon is to make things easier, isn't it.

Yeah, I guess just leaving this whole. I'm gonna leave that there for now and start being able to patch it back up. Slowly, gracefully, go down this beat without dying.

I'm sure you can manage that. It should work. Hey, look at that. We've got some advancements.

Do we have haste from that. Are we doing, are we perfect. So it's all preset and ready to go, which very conveniently means.

I can actually do some speedy mining. I'll tell you what, Recrap is a smart man. I can expand this even further along here. The way to remember how to build this is next to every hopper underneath a brewing stand there needs to be a torch going into it.

And hey, the terrain's kind of helping with that. I'm also gonna build the rest out of deep slate just to make it a little bit nicer. And if. Recrap expects me to decorate this entire room like he has, I don't know, that's a step too far for.

SB737. Now more of a functional person, not a metal but he has made everywhere look so nice. Go on then, on behind a bunch of deep slate and then.

I can put down an actual floor. Better to do this now before. I build the entire machine. I don't want to be too confident, guys, but this might actually go down to some of my best working.

Kinda looks good. It's also very important to have a little water refilling area here, so that's why. I've got those slabs. So you can stand here, fill your bottles and put them into the chest.

So in theory, if. I fill up all of these water bottles and push this button, it should begin brewing me the invisibility. I've disconnected this side because. I literally only have one to almost a shell, so yeah, I need to get a few more turtle shells.

Guys, I am really trying here, okay. I am really, really trying my best. I'm making, I'm trying to make this room look nice. It's taking everything.

I've got. Basically all. I need to do is just kind of copy the theme that. Recrap has set, you know.

I don't have to use my brain. It appears to be working absolutely perfectly. The invis is coming through. Meanwhile, I'm gonna really push the boat out and place down chisel deep slate.

Yeah, look at me going a little bit rogue. I don't know if. Recrap has a stash of secrets to somewhere, but. I'm gonna have my own stash.

I mean, I'm not bothered if he needs to take something out of it, but. I think having important things in a plane chest that anybody can find, you know. If this base gets found, I don't want people to be able to take everything.

I'm just sneaking in any extra little valley balls behind the wall. It's pretty much just all the cobwebs. I have, because. I don't have space in the end to keep them.

It'd be nice to be able to ever dedicate a shell because of the fallen, but at this point, with only six shellkers, that's not really a possibility. You know what, I think this room is looking pretty good. I do need to sort out the roof at some point. It seems to be using smooth sandstone, cut sandstone for the roof.

I'll come up with something, and it's gonna be a bit of a pain to do, but. I want to go back to my other base and get more resources to build a second one of these. I mean, this is working absolutely perfectly, though, loads of invisibility, and.

I am gonna be risking leaving the beam as well. No one else is online at the moment, hopefully nobody logs on, whilst. I'm away from the base. I probably don't even need the beacon anymore anyway.

The haste isn't really that useful, but you know what, I'm not going back to turn the beacon off now as well. I'll just have to accept what. I've got. Here we are, back again.

Let's get all of this mined up, and. I guess. I'll mine up this one as well for the resources because there's literally no interest.

And this one's in complete work in order, so. I guess it's good to have, you know, if. I ever come back to this base, I've at least got something that works.

I'm just quickly repairing my electric by trading. And whilst. I'm here, I think it's gotta be done. We are mining up and taking the turtle farm with me.

The turtle itself can stay in that water. He's gonna have a great life now, which he deserves after being the only turtle to survive the most pitily deep-down cat murder. Look at him go. He's loving life.

Alright, let's get out of here. And in theory, I have absolutely no reason to come back any time soon, which means. Clampus is sign that said move out. Well, I guess it's been achieved.

It's really nice to finally knock something off the to-do list. Alright, because. I know what. I'm like, I'm going to block the beacon up, just in case.

I forget. Now to build auto-brue number two, which is really, really easy to do, when all of the blocks are already placed down. Perfect, it's all set up. Let's give it a little test run.

The strength is brewing, the fire is brewing, and they are nicely coming out the other side into the chests. And now the only thing left for me to tackle is a turtle farm. Oh my goodness, the base is a natural slime farm. Well, that's a turn up.

Who needs slime. We can literally just get a mere. Yes, me and. Recrapt literally thought of everything when we built this base from a functional perspective.

This is pretty much done. I do need to get some turtle eggs so. I can actually get turtles in it. And kind of in line with.

Rex and. Tyre, cut sandstone. Okay, well we're gonna need more sandstone than that, but yeah, to keep the cut sandstone theme going, I'm gonna fill all of this in with that.

I kind of have an idea to make all of these walls look really, really cool. So we're gonna have to do a little bit of mining out first, and then. I need to go and get some resources. Glass is one of them.

I feel like glass is just something that we do not have enough of in this base. Like we just seem to be constantly running out of it, and we don't have a villager to trade it from. I think the first part of call, and. I know.

I said. I wasn't gonna go back to my old base, but it's just a one off all right, one more time. And yeah, I'm gonna head back and trade for loads and loads of glass.

How's it going guys, but you didn't expect to see me so soon, did you. Anyway, Operation. Enough. Glass to last me and.

Recap. Forever is now a go. Just to know that not every single one of them sells glass either.

Okay, well you're gonna sell it, that's good. It seemed that enough of them sell it to at least make this a worthwhile option. Yeah, I'm getting stacks and stacks very, very quickly.

After a load of trading, we are completely sorry for glass. I don't even have the space to carry it all. I'm gonna have to put some in shulker boxes. We've literally maxed out all the storage space.

I have everywhere. We'll chuck that there. And yeah, it really is nice to go back with a full inventory.

There's not really anything else that. I can take with me, so we'll just have to accept what we've got. And it'll just be nice to not have to worry about glass ever again.

What the heck, why do. I abandon chest in the sky with lol get prox. What, I don't know. I feel like the chances of finding that are super, super slim.

And then there's just nothing in it. Imagine if it had like a heart and it was something cool, that would be kind of insane. Okay, now why are there withers here. Is somebody battling.

Is this a farm. Wait a second, why are there withers in the water. And they're killing all the squid. Do we have a go.

No, you know what, SP just keep moving. You don't need to get involved with that. You don't need a wither. Could be three neather stars.

They're not really that hard to get. We've got a beacon of moonwreck. Yeah, we don't need to bother. Here we are, back at the base again.

I always feel like. I have to check the water. I know it's always gonna be there, but you just never know, do you.

The rest of the glass can all be added. Are there any empty chests by any chance. Doesn't it appear to be. Looks like it's using them all.

Okay, you know what. This is now officially the glass chest. And that's not even all of it. We've got blin-demo where that came from.

We'll chuck all that in and everything in the sugar as well. Is it a full chest worth. Look at that, brilliant. That's exactly what you need.

The rest of it can just all be glass bottles because they're kind of important as well. So yeah, Recrap, total farm question mark. Let's just take away that question mark. I now need to focus on getting a bunch of lava.

This nether portal is probably the easiest way to do that. All of these buckets can be filled. And then to make this total farm look cool, I'm gonna place blocks like this, then.

I'm gonna add lava like so. And mine away the blocks. And if. I've done everything correctly, we'll get a lava wall.

Perfect, all right, just gotta do it a few more times. It's wall number two, flowing down. And finally wall number three is also complete. You know what.

If, if, if. Rec wants to make this look any nicer, he can be my guest, but this, this is good enough for me. I am finally missing is some turtleneck. I'll take a load of that.

This bone meal is useful as well. Maybe a little section like in here could be the sea grass farm. If we need that, we might not even need a sea grass farm.

I've got quite a lot of it. And all those bone blocks as well, by the way. But yeah, let's, let's get the priority. Find some turtles.

And an ocean like this probably isn't a bad place to search. Here we go. I better deal with the mobs because these guys will just stamp on it.

Okay, let's, let's try and not die here as well. I said, you guys attack. You know what. Yeah, that works for me.

I had to come outside at night, couldn't. Couldn't have been placed in the lava during the night and then come out a day. No, no, no, perfect. Three eggs.

That's, that's more than enough for this. Couldn't theory breed more in five minutes time from these two. What'll do. So just have a little search around see if.

I can find any more turtles. Because that's probably easier than sitting and waiting around for five minutes. That would require patience or something. I apparently have none of.

You see, patience never pays. All right, let's do that. More of these guys, but why is there just so many of them.

Every one. I really need to craft some hearts on it. Like, it's just annoying being on seven hearts, especially considering there's no reason for it.

Who's throwing a trident at me. Now more importantly, where did you lay the eggs. And we have more eggs. Five.

All right, that's pretty good. I think that's enough for me to head back home. Oh my goodness, another slide. I told you this is basically a free slime farm and.

I realized to properly make this work and need to make it so that there isn't chains here or that why the babies won't be able to grow. Instead, they'll just fall down and we'll get the scoops and they'll die, but that's not the idea. So yeah, we need these to hatch. And then when these little fellas grow up, they can't be bred.

I've been setting the wall waiting patiently. I think at this point, there's enough adult turtles. I don't really want many more than this anyway. Otherwise, players are gonna start to realize that there's loads and loads of entities.

Wait, did. I pick up all the chains. Oh, this could be a little bit annoying. I forgot about this.

Yeah, I did, okay, right. Let's grab those. And we're gonna kind of have to place them like this, I think, so this is what's gonna make the turtles go down.

Right, okay, I'll tell you what. I'll also do. Inside of here, not least just, but this chest, we've got loads of more stone and.

I can use that to easily get down every single chain. I have a turtle builder put this side. My goodness, yeah, we are slightly over one with these, aren't we.

We're going to get to the blocks that. I need to. Move out the way, guys. I can always punch them.

Yeah, you know what, if in doubt, punch them out. You know, I hate to do this, but when. I look over here, I feel like there's maybe just too many turtles.

Like, it's just gonna be a bit of a risk. I have this many, there's definitely gonna be a spike on the entity counter. All right, it is not worth the risk just for a few extra scoops.

I reckon that's a good amount. There's plenty of eggs ready to hatch. There's lots of little baby turtles swimming in and around here.

You just can't really see them. When they grow up, the scoots will come into this chest, which is perfect. So we've now got a perfectly running turtle farm. The brewer is looking pretty good as well.

This is getting us pots so, so fast. I'll be able to get the turtle master one and a pun running once that farm pulls its way. Rex did a good job with all the armadillos and just kind of making the place look nice.

I think between us, it's a good team effort and there's plenty more to be done. So next time, Recra comes on, we'll see what he's thought. I will see what the next plan is. But it's very nice after all this time to finally have a roommate.

Don't forget to check out esp7loset. Store for all the cool new merch. And as I said, I bet your phone cases on there, there's a hundred different types of available.

And if you're enjoying life still, click this video on screen until watching another one.
